

Inspiring

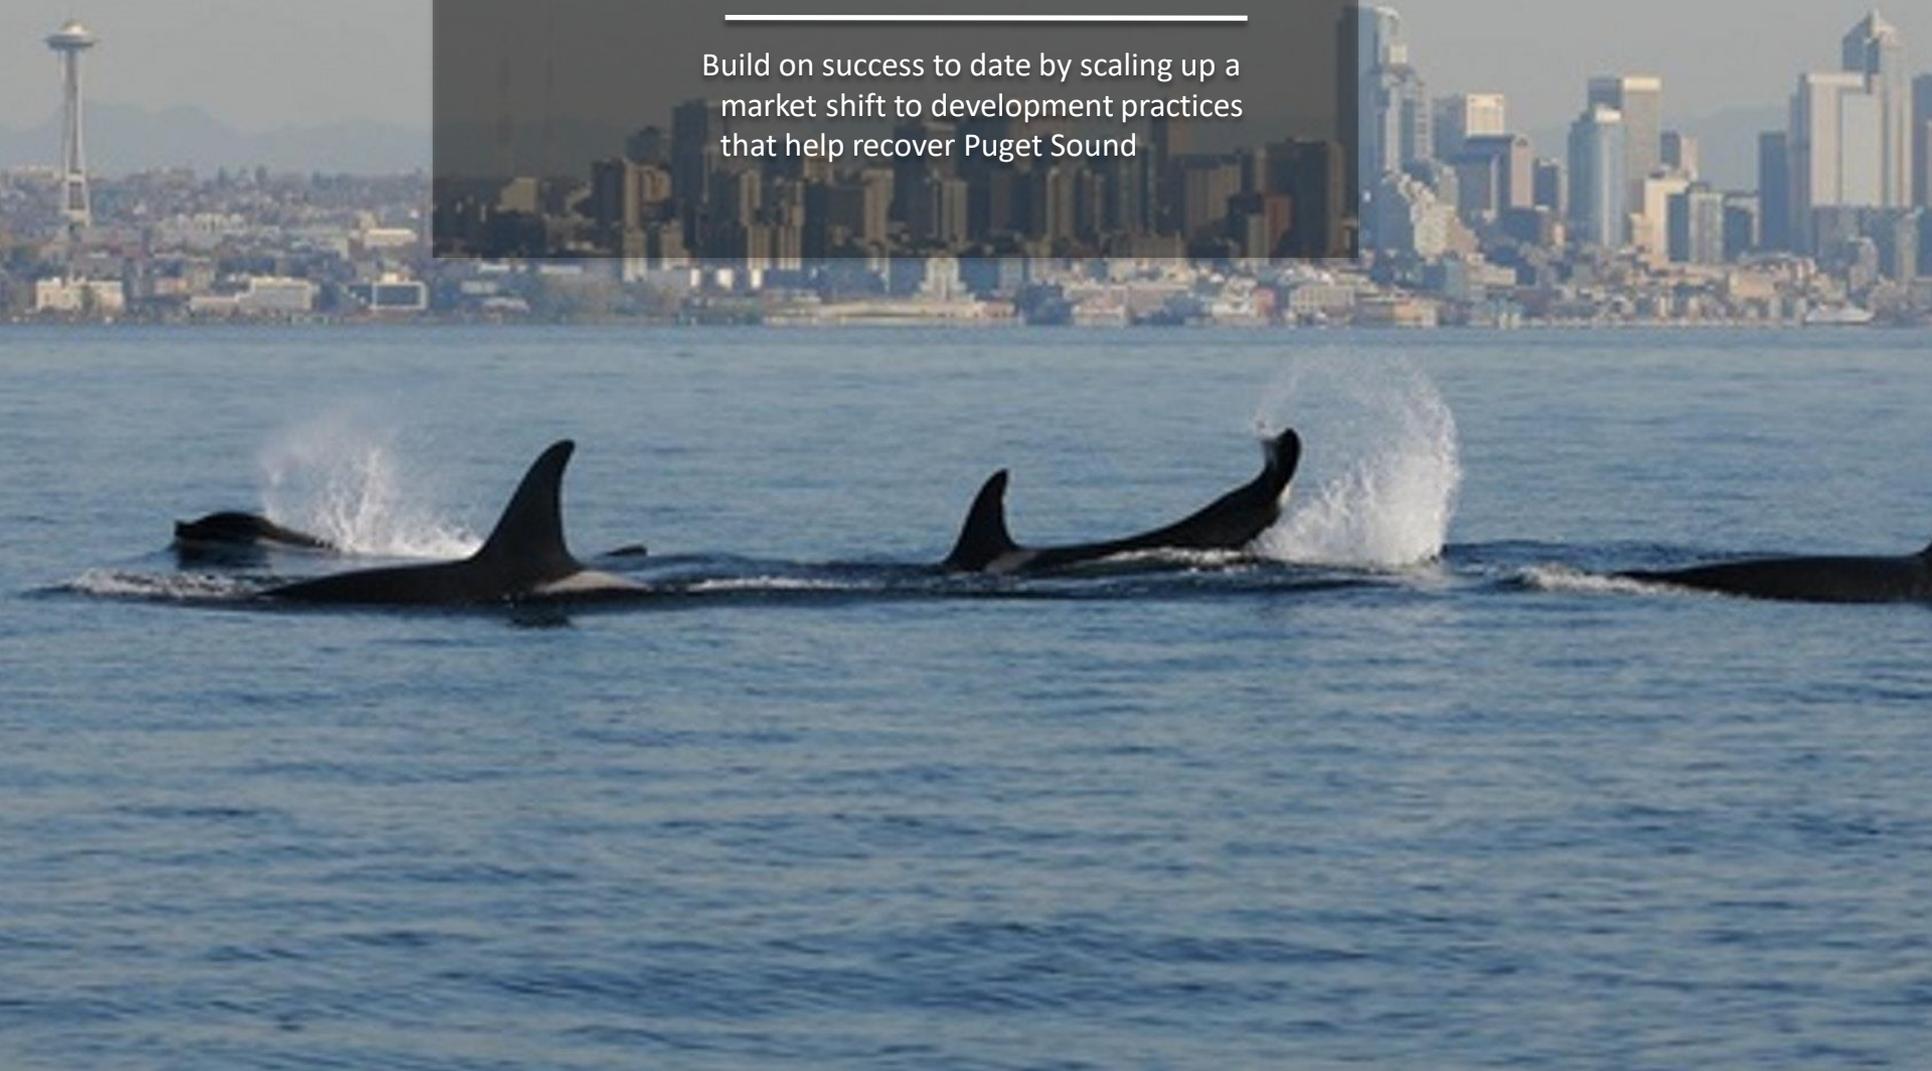

The protection of

Puget Sound

Salmon-Safe's Vision

Build on success to date by scaling up a market shift to development practices that help recover Puget Sound

SALMON-SAFE PUGET SOUND Our Priority Watershed

Salmon-Safe has focused on Puget Sound for more than a decade, beginning with joining with Seattle-based stewardship partners to transition more than 100 Puget Sound farms to certification.

REPORT OF THE SCIENCE TEAM
REGARDING SALMON-SAFE RECERTIFICATION
OF PORT OF SEATTLE PARKS AND
PUBLIC SHORELINE ACCESS SITES
SEATTLE, WASHINGTON

April 8, 2019

Port of Seattle

A new Puget Sound Focus Complex Infrastructure Projects

In addition to inspiring Salmon-Safe urban development practices, we're working to transition large, complex, and high impact sites like Seatac to Salmon-Safe development practices and operation

SEA-TAC IS SALMON SAFE

One Inch of rain = 11 million gallons
of stormwater run-off at Sea-Tac Airport

In **one year** that's **418 million gallons** or
930,000,000 full bathtubs

All storm water is treated before joining Puget Sound

This and other Salmon-Safe initiatives advance habitat restoration and water quality, helping salmon to spawn and thrive.

Sea-Tac becomes first US airport to achieve Salmon-Safe certification.

Sets bar among industrial landowners to protect Puget Sound water quality and salmon habitat.
